

PATRIOT3 MARITIME

# REVOLUTIONARY BY DESIGN

P3M delivers next generation gear for the maritime operator. From long range MarOps to Combat Swimmer equipment; our focus is to enhance the effectiveness of the operator in the maritime environment.

# CRRC GEAR

## 1 Wet & Dry Bow Bag

The P3M Dry Bow Bag provides durable and dry storage on board military inflatable boats. It mounts to the boat's existing D-rings and includes an oral inflation valve. It uses a heavy-duty YKK water tight zipper and is ideal for storing and accessing mission specific equipment. The integrated large MOLLE array can be utilized to increase the capabilities of the Wet and Dry Bow Bags. Users are able to secure critical gear for unlimited load-out options to satisfy mission specific needs.

The P3M Wet Bow Bag is made of heavy-duty polypropylene mesh material for rapid drainage and fitted with a large MOLLE array. The Wet Bow Bag can store multiple dry bags chosen for mission specific needs. During wet conditions, the Wet Bow Bag allows for access to only those items needed from a specific dry bag, keeping unneeded gear dry.

## 2 Cargo Net

The Cargo Net is an adjustable net designed to secure equipment and cargo when the boat is in motion. If capsized, the Cargo Net maintains its cargo and assists in the righting of the CRRC.

The Cargo Net is comprised of modular sections that can be adjusted in both length and width to fit 4.2 to 5.8 CRRCs. The Cargo Net connects to the boats D-rings via quick release Snap Shackles. Each shackle has a "monkey-fist" ball lanyard with a light-weight Delrin ball to allow for a sure grip and pull for releasing operations. All stainless steel hardware is treated with a black oxide finish.

## 3 High Pressure Inflatable Floor

The High Pressure Inflatable Floor is an alternative option to the standard CRRC Hard Deck. Made of Mil-Spec Neoprene and constructed using Drop Stitch Technology, its rigid shape conforms to the craft while in motion. The HPIF is compatible with all P3M CRRC Gear and can be rolled up with the 4.7 CRRC vessel for easy storage and transport.

## CRRC Deployment Kit

The P3M CRRC Deployment Kit offers all basic CRRC accessories in one package. This kit includes:

- 1 Cargo Net
- 1 Tow Line
- 1 Dry Bow Bag
- 1 Wet Bow Bag
- 3 Watershed Bags
- 4 Righting Lines

## 4 Nav Boards

The CRRC Navigation Boards act as the "dashboard" for your military inflatable boat by providing a central location for mission-critical navigation and timing devices. Made of durable Kydex, the CRRC Nav Board includes a shrouded SUUNTO Compass and a waterproof, disposable MNB Lite. It features accessory slots with rubber retention bands for GPS, watch, etc (accessories not included).

The CRRC Nav Board w/ Speedo and CRRC Nav Board w/ Brunton Compass have all the capabilities of the Classic CRRC Nav Board with additional features. The CRRC Nav Board w/ Speedo uses a SUUNTO compass and a built in speedometer for accurate speed management. The CRRC Nav Board w/ Brunton Compass has the advantage of a larger compass face that contains 5 degree graduation marks, increased board tilting range and the quality you've come to expect from Brunton. Both Nav Boards have an ambidextrous face for port and starboard side mounting. Each board is LED backlit with adjustable brightness, and are available in Red, Green and Blue light colors.

### Nav Board Choices:

Nav Board

Nav Board w/ Speedo

Nav Board w/ Brunton Compass

## 5 Towlines

The Towline allows safe, secure and speedy towing of your inflatable CRRC. This Towline pulls the CRRC from the transom and pontoon rears where the boat is less susceptible to damage. This allows for towing at faster speeds and eliminates the risk of ring tear-out which can cause severe damage to the CRRC.

P3M's Towline is made of 2" webbing and stainless steel hardware coated with black oxide. The CRRC 4.7 Towline has a 5,000 lb (2,268 kg) tow rating and the CRRC 5.8 Towline has a 7,500 lb (3,401 kg) tow rating.

# RESEARCH & DEVELOPMENT

Patriot3's (P3X) engineering is a bold and visionary team of highly skilled professionals that provides innovative products to assist in stealth and safety operations. P3X uses the principles of energy, material science, electronics and mechanics to design and manufacture machines and equipment of all types used by Military and Law Enforcement agencies worldwide. Using top level analysis, design, and synthesis, P3X puts new, exciting products into the hands of customers using the latest technology and progressive ideas.

# ABOUT PATRIOT3

## THE COMPANY

Patriot3, an American owned Small Business began operations in Quantico, Virginia in May 2000 to provide specialized equipment for Special Forces and Law Enforcement worldwide. Today, Patriot3 has four divisions that include, Ballistic Products, Elevated Tactics Systems, Maritime and Kinetics.

Patriot3 employs a full staff of Engineers, Sales and Field Representatives, Office and Production personnel at their Corporate Headquarters in Fredericksburg, Virginia. Day-to-day operations are much the same today as they were in the beginning. Patriot3's dynamic staff enjoys meeting the challenges of development, engineering, manufacturing, marketing and training of unique, state of the art tactical and maritime equipment.

Patriot3 enjoys a reputation as a premier provider and authority in tactical operations and specialty maritime products, as well as being a leader in innovation and winner of the prestigious Spirit of NTOA, Small Business Administration's Exporter of the Year and GovSec Homeland Security Awards. Patriot3 has products in operation all over the world and has exported to more than 40 countries.

Patriot3 strives to offer next generation products developed for unprecedented mobility and ease of use that address their client's latest challenges. Patriot3 always has numerous new products in all stages of development as well as continuing to upgrade and refine products currently in use.

Patriot3 Associates are eager to work with operators to find simple, viable solutions for the challenges they encounter in the field as well as ensuring Patriot3 products remain cutting edge and a step above.

### **Patriot3 Maritime**

Patriot3 offers a variety of innovative specialty equipment for waterborne operations. Our products are designed to enhance mobility, stealth and quick-strike capabilities in unforgiving environments.

### **Patriot3 Elevated Tactics**

Patriot3 is the worldwide leader in Elevated Tactics Systems (ETS). Our vehicle mounted systems permit elevated access to buildings, aircraft, trains and buses; assisting special units and rescue teams to take control of difficult situations.

### **Patriot3 Ballistics**

Patriot3 is a premier provider of lightweight, mobile ballistic products and shields. Our product line includes a wide range of patented personal protection shields, ballistic fragmentation systems and mobile ballistic barriers.

### **Patriot3 Kinetics**

Patriot3's newest division, P3K, was established to develop and manufacture ballistic measurement and instrumentation for tactical, military and ballistic test range applications. P3K also performs research, design, development, integration and support of ground based radar and airborne sensor systems designed to operate in severe and demanding environments.
