

JEYCO FAST ROPES

Jeyco's Fast Rope Assemblies have been designed to enhance rapid controlled decent from hovering aircraft. They are fabricated using specialist high strength, high grip swarming material for controlled comfortable decent and eliminate the need for heavy steel hardware connections with a specialist integrated Plasma headpiece.

The complete lightweight Fast Rope Assembly is a non-rotating fibre construction making rapid decent safer and with no heavy steel fittings the rope can be jettison without harm to personnel.

This system, identified by specific NATO part numbers, has been rigorously tested and proven over many years by the Australian Defence Forces, Australian Police and various other Special Forces throughout the wider Australasian region.

FEATURES

- Allow up to five (5) personnel (120 kg each person/equipment), to rapidly descend in a controlled manner from a hovering aircraft.
- Lightweight non rotational construction, easy to handle
- Advanced Plasma HMPE crown eliminating steel hardware
- Offered in fully customizable lengths, standard lengths from 60' to 90'
- Colour: olive with purple crown
- NATO approved part numbers
- Custom carry bags available
