

SV-2 DIVING MASK

The Apollo SV-2 Diving Mask is a lightweight, low-volume dive mask engineered for tactical, military and special operations diving. Its ergonomic design delivers a wide field of vision with minimal internal volume to facilitate easy clearing during deployments and rapid water entries. The mask features a soft, low-volume silicone skirt that conforms comfortably to the operator's face, improving seal integrity while reducing drag and fatigue during prolonged use.

A distinctive feature of the SV-2 is its revolutionary push-button buckle system with flexible swivel attachments, which allows rapid strap adjustment and effectively absorbs shocks that might otherwise cause buckle breakage during rough field operations.

Available in clear glass or optional CR-39 Lexan polymer lenses (enhanced impact safety), the SV-2 enhances underwater situational awareness while maintaining rugged performance in demanding environments.

FEATURES

- **Low Internal Volume Design** — Promotes easy clearing and a broad field of view for enhanced underwater awareness.
- **Soft, Comfortable Silicone Skirt** — Black double-flanged silicone enhances seal and comfort for extended missions.
- **Revolutionary Push-Button Buckles** — Enables rapid, single-handed strap adjustment with flexible pivot points that absorb shock and prevent buckle failure.
- **Flexible Swivel Buckle Attachment** — Moves with facial motion for improved fit and durability.
- **High-Quality Tempered Glass Lenses (Standard)** — Durable optics with excellent clarity.
- **Optional CR-39 Lexan Polymer Lens Upgrade** — Offers increased impact resistance for heightened safety in high-energy water entries.
- **Tactical Black Finish** — Low-visibility colour suitable for defence and special operations use.

SPECIFICATIONS

SPECIFICATION	DETAIL
Mask Type	Low-Volume Tactical Dive Mask
Skirt Material	Double-Flanged Silicone
Lens (Standard)	Tempered Glass
Buckle System	Push-Button Quick Adjust with Flexible Swivels
Colour	Black Silicone / Frame
Field of View	Wide
Internal Volume	Low — facilitates easy clearing
