

SV Dry Flex Silicone Snorkel

The Apollo SV Dry Flex Silicone Snorkel is a high-performance, drop-away style breathing tube designed for surface support, diving readiness, and tactical operations. Engineered with an ergonomic flex-tube design and a splash-proof dry guard, this snorkel reduces water intake and delivers efficient breathing during surface swims and pre-dive stages – improving operator comfort and conserving air supply before submersion. The flexible lower section automatically moves out of the way when transitioning to regulator use.

A replaceable orthodontic silicone mouthpiece and quick-release mask attachment buckle enhance comfort and allow rapid deployment and removal, especially under operational or emergency conditions. The streamlined oval bore improves airflow while minimising drag.

FEATURES

- **Drop-Away Flexible Tube Design** – Lower section swings clear during regulator use.
- **Splash-Proof Dry Guard** – Reduces water entry from surface wave and spray.
- **Large Easy Purge Chamber** – Self-draining bottom chamber simplifies clearing.
- **Quick-Release Buckle Attachment** – Enables rapid one-hand disengagement from mask.
- **Ergonomic Replaceable Silicone Mouthpiece** – Comfortable for extended surface use and easily serviced.
- **Streamlined Oval Bore** – Improves airflow and reduces drag during surface respiration.
- **Multicolour Tactical Options** – Supports unit identification or personal configuration.

SPECIFICATIONS

SPECIFICATION	DETAIL
Style	Drop-Away Tactical Snorkel
Tube Type	Flexible Lower Section with Dry Guard
Mouthpiece	Replaceable Orthodontic Silicone
Purge System	Large Self-Draining Chamber
Attachment	Quick-Release Buckle to Mask
Bore Shape	Streamlined Oval
Colour Variants	Multiple (Black, Clear, Blue, etc.)
